Pool Maintenance

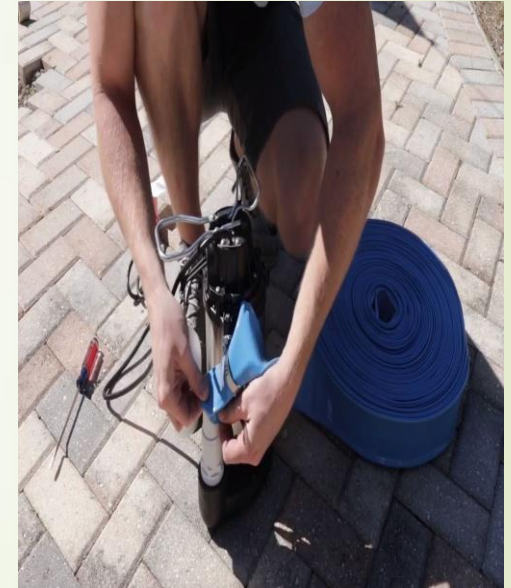

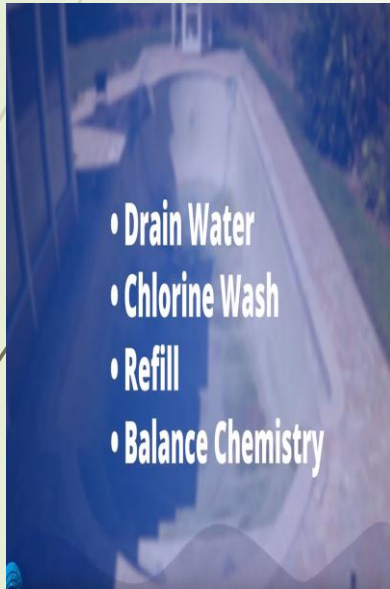

Draining pool

- **Role of Chlorine in water-** As a halogen, **chlorine** is a highly efficient disinfectant, and is added to public **water** supplies to kill disease-causing pathogens, such as bacteria, viruses, and protozoans, that commonly grow in **water** supply reservoirs, on the walls of **water** mains and in storage tanks. If there is imbalance of chlorine in the pool water, that time we need to drain the pool along treat and shock before refilling with new water.

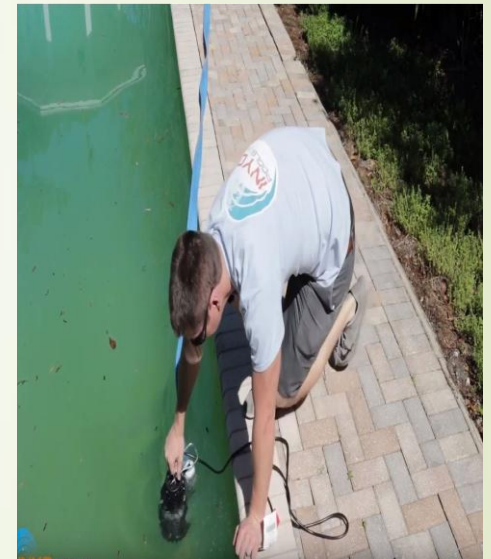

Process of Draining

- Few chemicals and materials like pump, hose pipe, generator (if electricity found off) and other items needed to drain a pool.

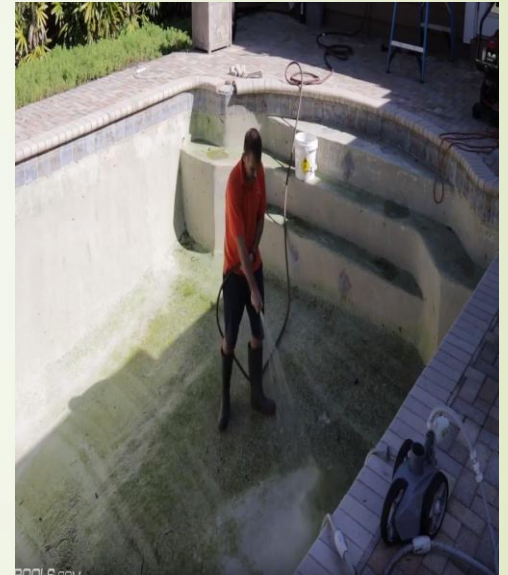

Process of Draining

- Connecting hose pipes with pump and other part into the jungle or the place where the water can be flown of. And the sump pump will be set under the water for a proper pumping.

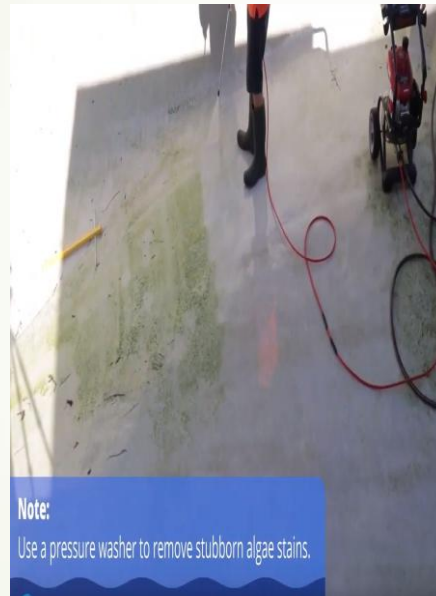

Process of Draining

- Start draining after all the equipment's being set properly.

Process of Draining

- Applying pressure wash to remove moss from the pool interior.

Note:
Use a pressure washer to remove stubborn algae stains.

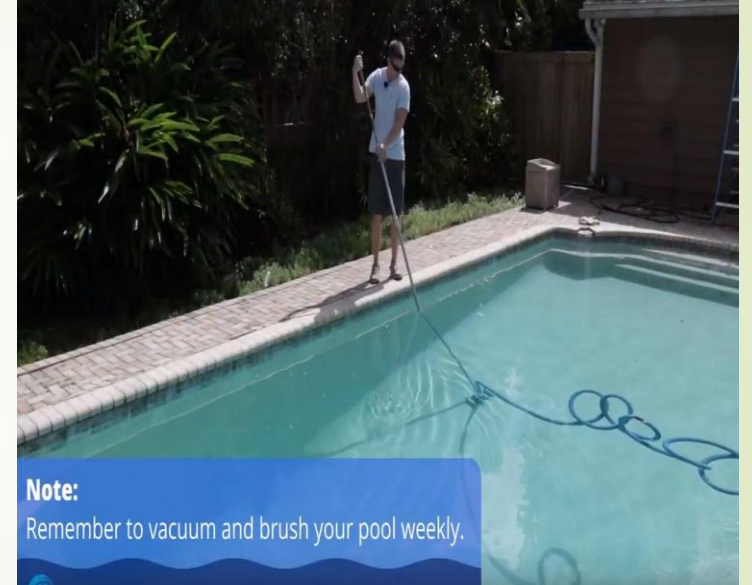

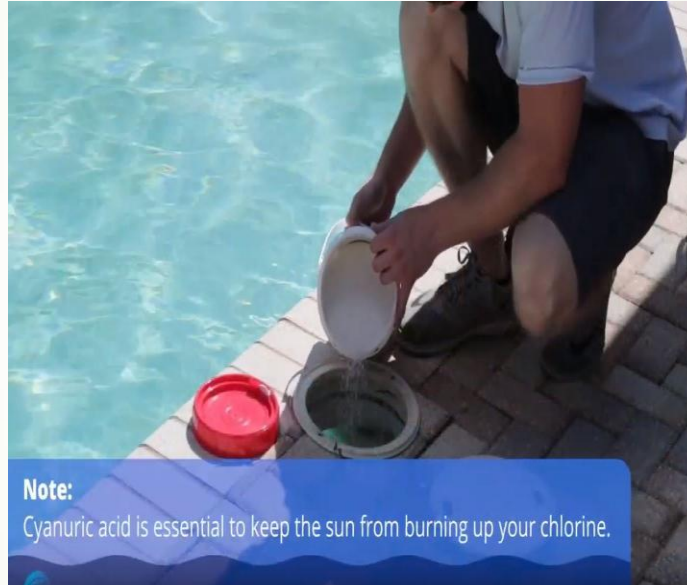

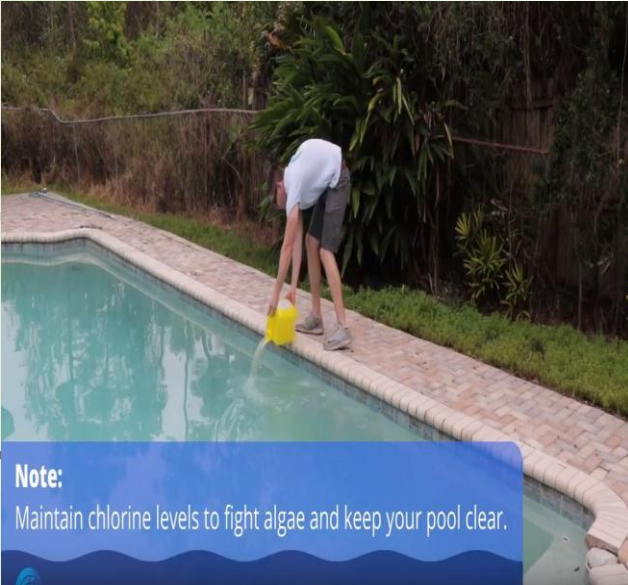

Process of Draining

- After draining old and dirty pool water, Re-check or change the pool filter to keep the water clean by changing the water schedule wise.

Pool refilling and maintenance

- Applying chlorine to keep the water clear.

After completing treating, cleaning, and draining. Pool filled up with new water. Chemicals are mixed along with the water to be in real color.

Bid scopes for treat, draining and refilling a pool.

- Drain Above ground/ inground pools
- Refilling pools with water
- Maintenance or pool, Spa and Hot tub (monthly)
- Acid wash pool
- Treat & shock Above/ inground pool
- Remove/ replace pool filter
- Winterize pool

Securing Pool

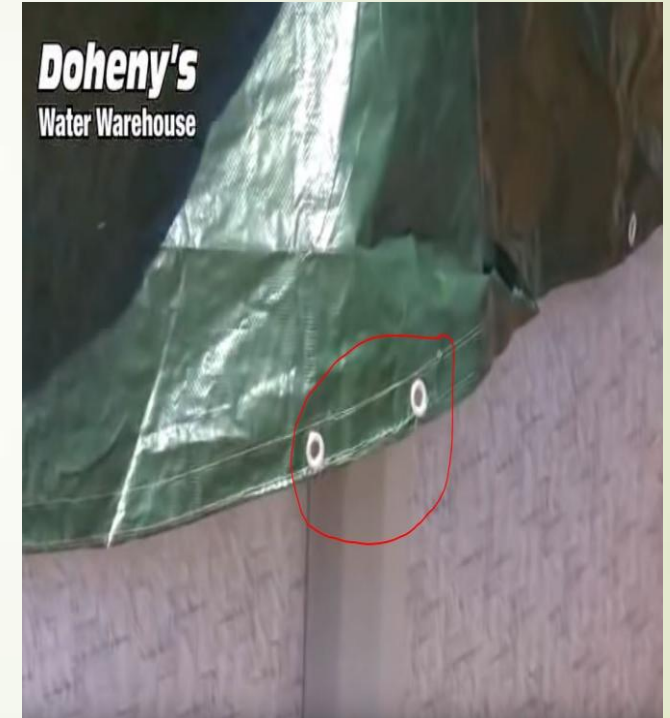

Securing process of Above ground pool

- By using mesh cover we usually do secure the above and inground pool.

Securing process of Above ground pool

- Installing mesh cover to secure above ground pool

Securing process of Above ground pool

- Installing mesh cover to secure above ground pool

Securing process of Inground pool

- Installing mesh cover to secure in- ground pool

For inground pool sometimes we need to make wooden frame to keep that mesh cover tight with the structure as there might have nothing to stuck the mesh cover side portions to secure the pool.

NB: Now a days it's not use that much. But in general we tarp with mesh cover like above ground pool. Process is same. Its just a different way of tarping inground pools.

Bid Scopes for Securing a pool.

- Secure hot tub, pool and spa – including cover
- Securing In-ground Swimming pool to HUD specs
- Secure pool with wooden frame with wire mesh on them.
- Secure Hot-Tub or Spa, pool - Without Cover
- Secure with framed cover.

Demolish Above Ground Pool

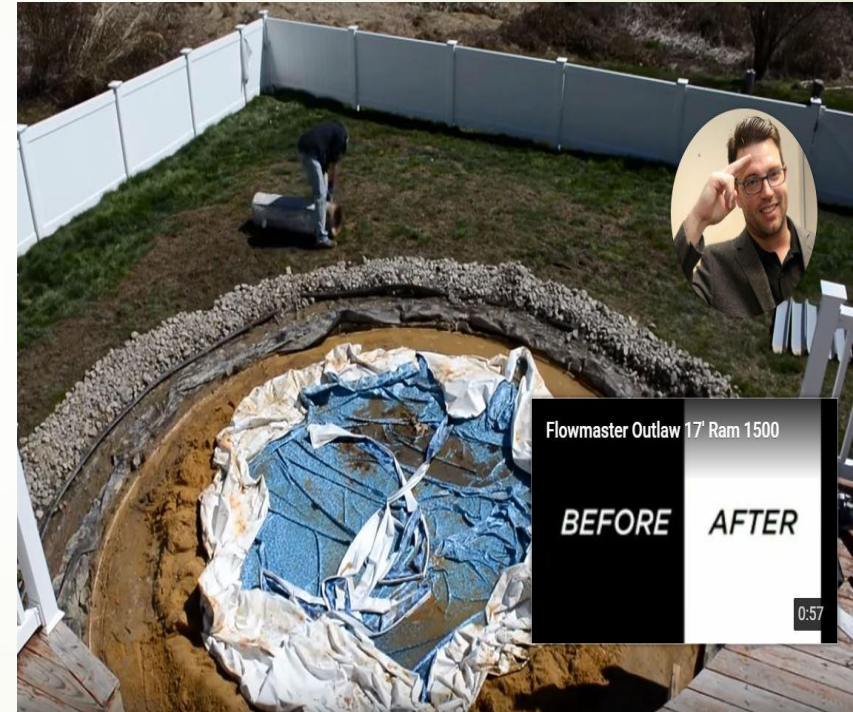

Demolition of damaged above ground pool.

- When a pool is out of service or in worst condition then need to remove that pool to avoid further potential damages.

Demolition of damaged above ground pool.

➤ Demolition on going....

Bid scope for Pool Demolition

- Remove above ground pool
 - Remove generated debris from pool removal task
 - Fill in dirt the place where the pool belongs to. (if need)
- 

Note: Usually we did not receive any order to make a new pool. Pool is a part of their home making so they usually made it while home made off. We just take care and sometimes remove/secure the pools based on situation or client wish.

Follow the Xcel file to find the line items in RB and XactPrm those are related with pool works.
